

ABSTRACT OF THE DISCLOSURE

~~There is provided a~~ A capsule for dental restoration material~~[[,]] which can administer~~  
capable of administering, immediately after mixing, a mixture substantially free of air  
bubbles to a patient site to be restored ~~is disclosed of a patient with a mixture in a good state~~  
~~where air bubbles are not substantially contained, immediately after mixing. In the~~ The  
~~capsule for dental restoration material comprises for directly administering to a restoration~~  
~~site of a tooth with the mixture prepared by subjecting a dental restoration material~~  
comprising two components of definite amounts of previously weighed powder component  
and liquid component accommodated in a cylindrical mixing compartment in an isolated state  
from each other ~~to making the liquid component flow into the mixing compartment and~~  
~~mixing the both components, and~~ an air-permeable filter that does not pass allow the powder  
component ~~therethrough to exit the mixing compartment,~~ but can ventilate air within the  
mixing compartment into the outside of the mixing compartment ~~is placed in at least a part of~~  
~~a peripheral wall of the mixing compartment.~~
